

ACCESSORIES

Knock-out box (black)

Coffee grounds container for cafés and home use, plastic with anti-slip function, knock-out box

It usually consists of a small container with a sturdy, often rubber-coated cross bar (the knock bar). After brewing, the portafilter is knocked against this bar, releasing the puck into the container. This allows quick, clean emptying of the portafilter without banging the metal against a bin — which could damage the portafilter.
